

SPINAL CORD INJURY

OVER 40 YEARS OF EXCEPTIONAL CARE AND REHABILITATION

In an area of medicine where numbers matter and experience counts, Santa Clara Valley Medical Center has treated over 5,500 individuals with spinal cord injury (SCI) over the past 45 years. With more SCI board-certified physicians than any center on the West Coast and a team of highly skilled and experienced nurses, therapists, psychologists, case managers and other rehab specialists, SCVMC is the region's unequalled choice for spinal cord injury rehabilitation.

If you or someone close to you has a spinal cord injury or disorder, you can count on carefully tailored treatment that meets your specific rehabilitation and post-rehab goals. Getting you back to your life with as much function, independence and quality as possible is our primary focus. You can count on the promise that although we are nationally recognized for SCI research and rehabilitation services, the spinal cord injury we'll be focusing on is the one that affects you and your family.

"When I started here we helped build the field of Spinal Cord Injury rehab from the ground up. We pioneered the interdisciplinary team. We helped identify the most effective rehab interventions. A lot has changed since then. But the passion for the work stays the same."

Conal B. Wilmot, MD
Chair, Dept. of Physical Medicine &
Rehabilitation, 1976-1992

A LEADER IN REBUILDING LIVES

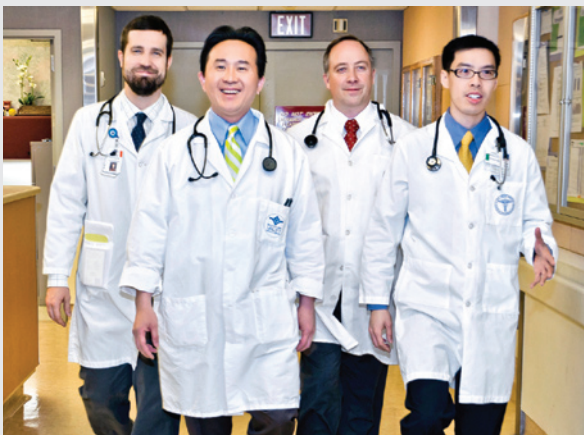

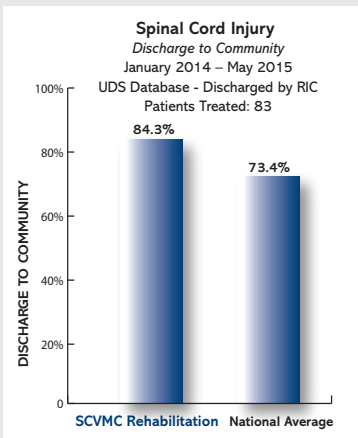

ADVANCED TREATMENT, SPECIALIZED PROGRAMS & DEDICATED PEOPLE

What is Measured:

Discharge to Community – the percentage of individuals with SCI who return to the community (rather than another care facility) following rehab.

Why it Matters:

Reintegration into the community is one of the most important goals of SCI rehab and is a strong indicator of improved functional outcomes during inpatient rehabilitation.

Where experience counts, we have the numbers:

The more than 25 individuals who make up the rehab therapy staff at SCVMC average over 11 years of serving patients in the area of physical rehabilitation.
